('Why Farm Supply Shops Need a POS Built For Them', 'Harvests don't wait for a signal')

Planting season brings a rush of buyers while the village signal often drops. Paper books make fertilizer stock drift, farm credit is untracked, and receipts are rewritten by hand.

('POS Flow', 'From cart to receipt in four steps')

The cashier only scans or picks items. Everything else is calculated automatically.

('Delivery & Warehouse', 'Truck delivery, with proof on site')

A delivery order counts as delivered only after the driver confirms the goods were unloaded at the customer's site. Until then, it stays on the books as a receivable.

('Coming Soon', 'Warehouse and purchasing')

Advanced features for shops that run a warehouse and buy from many suppliers.

('Devices & Security', 'One shop, many devices')

The owner's phone is the shop's data hub. Each person sees only what they need.
